Education

Indian Institute of Information Technology , Nagpur CGPA : 7.5
Batchlor's In Technology (B.Tech) , Specialization in Data Science and analytics Jul. 2022 – June 2026

Experience

Impacto Digifin Technologies Aug 2025 – nov 2025
Artificial Intelligence and Machine Learning - Intern

- Developed and evaluated LLM pipelines focused on document understanding, response accuracy benchmarking, and reliability analysis across diverse retrieval and inference workflows.
- Built a bank reconciliation engine integrating OCR, transaction parsing, rule-based matching, and validation pipelines to automate financial statement reconciliation and improve matching accuracy.
- Designed real-time voice generation agents using speech synthesis and efficient local models, improving conversational naturalness, low-latency inference, and on-device deployment capabilities.

Achievements

3 rd place - MITSUI&CO. Commodity Prediction Challenge MITSUI&Co and Kaggle

- Secured 3rd place globally among 1,700+ participants in a Kaggle-style quantitative forecasting competition by developing a robust ensemble-based prediction pipeline optimized for stability under volatile market conditions.
- Designed a two-level stacked ensemble combining LightGBM, Random Forest, and XGBoost with target-specific modeling strategies, intentionally prioritizing variance suppression and reliable directional forecasting over leaderboard overfitting - earning a Kaggle Gold medal.

Projects

Stocks stream - stock market ETL and Jan 2025 - Aug 2026

- Developed a real-time and batch stock market ETL pipeline for collecting, processing, and analyzing large-scale financial data from multiple market sources.
- Built ML-driven forecasting and analytics workflows integrating automated data ingestion, feature engineering, and scalable preprocessing pipelines.
- Designed production-oriented data engineering systems with focus on reliability, streaming efficiency, and low-latency financial data processing.
- <https://github.com/AYUSHKHAIRE/stocks-stream>

Docinium : Your Desktop Instance on the web ! Jan 2025 - Aug 2026

- Engineered a browser-based container desktop platform ("Docinium") enabling users to launch and interact with isolated Linux environments remotely without local setup or installation.
- Built real-time container orchestration, session management, and browser interaction pipelines supporting remote execution, filesystem access, and scalable sandboxed environments.
- Designed lightweight remote desktop streaming and developer infrastructure workflows focused on accessibility, cloud execution, and low-overhead browser-based computing.
- <https://github.com/AYUSHKHAIRE/docinium>

Technical Skills

- Languages & Web: Python, SQL, JavaScript, Bash, HTML, CSS
- Frameworks & Tools: Django, Django Channels, Streamlit, Docker, Git, GitHub, Linux
- Cloud & Data Engineering: Google Cloud Platform (GCP), NGINX, ETL Pipelines,, Apache Kafka, Stream & Batch Processing
- AI/ML, Databases & Concepts: Scikit-learn, Vertex AI, Google Gemini, Google Vision, MediaPipe, OpenCV, MySQL, MongoDB, JSON, CSV, Parquet, Real-time streaming, Web Scraping, Data Analysis & Visualization, LLM & AI Integration, Asynchronous Programming, Accessibility Design
- PyTorch, CUDA, Transformers, Hugging Face, embedding models on GPUs, LLM fine-tuning & inference in Docker, model saving/loading, document scanning & OCR pipelines, RAG (Retrieval-Augmented Generation) on vector databases (Quadrant) with evaluation and benchmarking.
